

AI Use Declaration - Lab 02

I used Claude (Anthropic's AI assistant) throughout this lab in the following ways:

- Guidance on Colab navigation: I am new to Google Colab and asked Claude to explain how to run cells, add new code/text cells, reorder cells, and understand the notebook's overall workflow.
- Drafting predictions and answers: For each  prediction/answer cell in Parts 0-3, I discussed my reasoning with Claude before writing my own prediction, and asked for help phrasing my answers in clear English once I understood the underlying concept.
- Interpreting results: After running each cell, I asked Claude to help me interpret the numeric output (token counts, attention scores, probabilities) and connect them back to the lecture's concepts.
- Extension tasks: For the four extension tasks (Core 1-3 and Advanced 4), I asked Claude to help me write the Python code to answer each task's "Do" instruction, based on the exact specification given in the lab's README. I ran all code myself in Colab and verified the outputs against the "Expect" values given in the README before writing my own reflection answers.

I did not use AI to generate model outputs, run experiments on my behalf, or make claims I did not verify by executing the code myself. All numeric results in this notebook come from my own executed cells in Colab. All written reflections are in my own words, based on my understanding of what the executed code showed.
